Dear Hiring Manager,

I am eager to discuss your open entry-level software engineer position; my resume is attached for your consideration. I am currently studying computer science and mathematics with a minor in computer information systems at Dominican University. I believe that my technical skills combined with leadership experience consisting of critical-thinking skills, interpersonal communication with clients and team members, and a keen eye for detail under pressure make me an exceptional candidate for this position.

During my recent experience as a full-stack software developer intern, I engineered dynamic UI systems using Unity and C# that retrieved, updated, and stored real-time server data. I actively debugged dozens of multiplayer social features and rewrote numerous methods to resolve critical transaction races, successfully eliminating the loss of user data. Through team discussion, managing Trello tickets, and utilizing GitHub, I gained hands-on experience quickly learning brand new frameworks within Unity. I immediately applied my knowledge to significantly improve user experience and bring the mobile app, *BattlePlanes,* to the verge of a ready-to-deploy state.

In addition to my internship, I have engineered other full-stack solutions, including an HR Management Web application using ASP.NET MVC and Entity Framework. By implementing a mixture of C#, SQL, HTML, and jQuery to create a server-authoritative application that tracks employee records and department budgets, I developed a deep understanding of modern web development and database integration into live user interfaces. Additionally, I built a React + Typescript frontend & FastAPI + Python backend application that takes a linear program from user input, executes the logic to solve the problem, and displays a 2D visual representation of its optimal solution. The project is hosted online through Vercel and highlights my understanding of converting advanced mathematical concepts into practical, real-world applications.

Beyond my technical projects, my background in fast-paced, quick-turnaround environments, such as my time managing high-volume trailers at UPS and leading shifts for a family-owned landscaping business, has instilled in me with a rigorous work ethic. These experiences taught me to work not just *with* my team, but *for* them as well. I thrive under clear expectations and strict deadlines, am fully bilingual in English and Spanish, and understand how to communicate actionable feedback to elevate peer performance and drive those around me to do their very best.

Thank you for your time and consideration. I look forward to discussing this opportunity with you.

Sincerely,

Miguel Camarena
